PROFESSIONAL SUMMARY

Aspiring Cloud & DevOps Engineer with hands-on experience in AWS, Linux, Jenkins, Docker, Kubernetes, Git, Python, and CI/CD Automation. Experienced in infrastructure monitoring, log analysis, incident response, and cloud deployments through internship and project work. Passionate about building reliable, scalable, and automated software delivery pipelines while continuously learning cloud-native and Site Reliability Engineering (SRE) practices.

TECHNICAL SKILLS

Cloud Platform — AWS – Compute (EC2, Lambda), Storage (S3, EBS), Networking (VPC, Route 53, ALB/ELB), Security (IAM), Monitoring (CloudWatch, CloudTrail), Database (RDS), CDN & Messaging (CloudFront, SNS), Azure

Devops & CI/CD — Docker, Jenkins, Kubernetes

Operating System — Linux (User Management, File System, Process Management, Permissions, Shell Scripting)

Networking — TCP/IP, DNS, HTTP/HTTPS, VPC, Subnets, Route Tables, NAT Gateway, Security Groups

Programming & Version Control — Python, Git, Github

Monitoring & Infrastructure — Prometheus, Grafana, Ansible, Terraform

EDUCATION

Info Institute of Engineering, Coimbatore, (2021 – 2025)

B.E. Computer Science and Engineering,

Affiliated to Anna University.

INTERNSHIP

BDreamz Global Solutions Private Limited

Successfully completed a Cloud Computing Internship, gaining hands-on experience with AWS cloud services and DevOps practices.

- Built CI/CD pipelines using Jenkins, Docker, Kubernetes, and Ansible.
- Monitored infrastructure and applications using Prometheus and Grafana.
- Collaborated with the team to troubleshoot issues and streamline software delivery.

Technologies: AWS, Linux, Jenkins, Git, GitHub, Docker, Kubernetes, Ansible, Shell Scripting, Prometheus, Grafana.

PROJECTS

Frontend E-Commerce Website Deployment on Kubernetes using Jenkins, Docker & CI/CD Pipeline 🔗

- Designed 4-VM AWS EC2 DevOps architecture: VM1 (Ansible, Prometheus, Grafana), VM2 (Jenkins, Docker, Git, kubectl), VM3 (Kubernetes Master Node), and VM4 (Kubernetes Worker Node).
- Built a CI/CD pipeline using Jenkins to automate Docker image build, Docker Hub push, and Kubernetes deployment
- Automated configuration using Ansible and monitored application performance using Prometheus & Grafana.

Flow: Developer → GitHub → Jenkins → Docker Build → Docker Hub → K8s Master → K8s Worker → Deployment → Prometheus → Grafana

Tech Stack: AWS EC2, Jenkins, Docker, Kubernetes, Ansible, GitHub, Prometheus, Grafana.

Scalable & Highly Available Web Application Infrastructure on AWS 🔗

- Designed and deployed a highly available web application on AWS using VPC, EC2, ALB, and Auto Scaling Group (ASG) across multiple Availability Zones.
- Configured EC2 instances with Apache HTTP Server, created a custom AMI, and built a Launch Template for automated provisioning.
- Implemented ALB, Target Groups, and health checks to distribute traffic and ensure high availability and fault tolerance.
- Configured Auto Scaling (Min:1, Desired:2, Max:3) and integrated CloudWatch, SNS, and Route 53 for monitoring, alerting, and DNS routing.

Architecture Flow: User → Route 53 → ALB → Target Group → EC2 (ASG) → CloudWatch → Alarm → SNS → Email Alert

Technologies: AWS (IAM, VPC, EC2, AMI, Launch Template, ALB, Target Groups, Auto Scaling, CloudWatch, SNS, Route 53, NAT Gateway), Apache HTTP Server, Amazon Linux 2.

CERTIFICATION & TRAINING

- AWS Cloud Computing & DevOps Training — Besant Technologies
- Salesforce Developer — Salesforce
- Networking Essentials — Cisco

SOFT SKILLS

- Good Communication, Team Collaboration, Problem Solving & Troubleshooting
